DIGITAL LITERACY PROJECT REPORT

Name: Palak Bhatla
Registration Number: 25BCY10014
Course Code: CSE0001
Course Title: Digital Literacy

Introduction

In today's digital world, having basic digital skills is essential for students. This project was assigned to help us understand how to use digital tools effectively, build a professional online presence, and stay safe on the internet. As a Student Digital Ambassador, my role was to explore different platforms and create useful resources that can help my peers.

This project includes five tasks such as creating an infographic (visual presentation), building a digital portfolio, exploring coding platforms, writing professional emails, and understanding cybercrime. Each task helped me learn something new and practical. Overall, this project improved my digital awareness and gave me confidence to use online platforms responsibly and professionally.

Task 1: Digital Literacy Visual Presentation

For this task, I designed a one-page "Digital Literacy Guide" using Canva. The infographic is structured into three clear sections to help my peers understand the essential skills needed for the digital world a definition of digital literacy, a list of useful tools, and safe internet practices.

In the design, I utilized a vibrant blue theme with a structured tab style layout and friendly illustrations to make the information visually engaging and accessible. Specifically, I highlighted essential productivity and collaboration tools such as Google Workspace, Grammarly, Notion, and Zoom, which are vital for modern student life. In the Safe Internet Practices section, I emphasized actionable tips like using strong passwords, adjusting privacy settings, and practicing good digital etiquette.

The most interesting part of this process was learning how to balance informative text with visual hierarchy to ensure the message remains clear at a glance. The most challenging aspect was synthesizing broad concepts into concise, meaningful bullet points that fit the layout without compromising depth. Overall, this task enhanced my ability to communicate complex digital concepts effectively to a student audience.

Task 2: Digital Portfolio

In this task, I created accounts on GitHub, LinkedIn, and Kaggle to build my digital portfolio. Each platform has its own importance. GitHub is used for storing and sharing coding projects, LinkedIn helps in building a professional network, and Kaggle is useful for learning data science and practicing problems.

On GitHub, I created a profile README that includes my name, branch, and my learning goals. On LinkedIn, I added my education details such as my college name and degree. These platforms will help me showcase my skills and projects in the future.

Over the next four years, I plan to use GitHub to upload my projects, LinkedIn to connect with professionals, and Kaggle to improve my technical skills. This task helped me understand the importance of having a professional online presence from the beginning of my career.

Task 3: Coding & Collaboration Platforms

For this task, I used HackerRank as my coding platform and solved a beginner-level problem. It helped me understand basic problem-solving and improved my confidence in coding. I also learned how these platforms provide practice and help in preparing for placements.

In the second part, I created a Google Form with five questions related to digital literacy awareness. The form included both multiple-choice and short-answer questions. I also checked the responses in Google Sheets, which showed how data can be collected and analysed easily.

These tools are very useful for academic purposes. Coding platforms help improve programming skills, while Google Forms can be used for surveys, quizzes, and feedback collection. This task helped me understand how technology can make learning interactive and efficient.

Task 4: Email Etiquette & Communication

In this task, I wrote two professional emails—one to a professor requesting an extension and another to a company for an internship opportunity. I learned how to structure emails properly with a clear subject line, greeting, body, and closing.

I also created a social media checklist with do’s and don’ts. This helped me understand how students should behave responsibly online.

A common example of poor digital communication is sending informal or incomplete emails without a proper subject or greeting. This creates a bad impression. Such issues can be avoided by using a professional tone, writing clearly, and following proper email structure. This task improved my communication skills and made me more aware of digital etiquette.

Task 5: Cybercrime Awareness

In this task, I studied cybercrime, especially phishing and online fraud. I learned how attackers trick people into sharing personal and financial information through fake messages or links.

One thing that surprised me was how easily people can become victims if they are not careful. Even simple mistakes like clicking unknown links can lead to serious problems.

As a result of this task, I will be more cautious while using the internet. I will avoid sharing sensitive information online and will always verify links and messages before responding. This task helped me understand the importance of cybersecurity and how to stay safe in the digital world.

Conclusion

This project helped me gain practical knowledge about digital literacy. I learned how to use different online platforms, create professional content, and communicate effectively. It also made me aware of cyber threats and how to avoid them.

Overall, this project improved my confidence in using digital tools and taught me important skills that will be useful in my academic and professional life. I believe these learnings will help me become a responsible digital citizen.
